

JEHAD

BABAWAT

Fullstack developer — game programmer at heart

I build software the way games are built: to pull people in, not just function. MSc in computer science, a live product in daily use at a Norwegian consultancy, and an Android app I designed and directed end to end.

EXPERIENCE

- Fullstack Developer

2025 — 2026

Brobyggere AS LIVE PRODUCT

— Co-built a booking & HR platform with one other developer, from scratch in React and Firebase — live and in daily use by consultants.

— Owned the **live chat, employee, customer and feedback modules**: full CRUD, real-time sync, advanced filtering, role-based views.

— Scoped the stack and set delivery expectations on my first industry project — learning React and Firebase while shipping to real users.
- AI Programmer — MSc thesis

2025 — 2026

University of South-Eastern Norway RESEARCH

— Built **Steroid Zombies**, an isometric survival shooter in **Unreal Engine 5 (Blueprints)**, to test whether reinforcement learning can hold players in flow.

— Designed the telemetry and a **three-phase study** (Python for training and statistics): 15 players mapped to the Flow Short Scale, a PPO agent trained against a simulated player, then a 19-player evaluation.

— Honest result: adaptive difficulty scored the **highest mean flow (5.41)** with the tightest spread, but **no statistically significant edge** over static difficulty; the agent developed an always-harder bias. Reward design mattered as much as the algorithm.

SELECTED PROJECT

- Nidaa — prayer-times app

2026

Personal product, Android RELEASE CANDIDATE

— Designed and directed the product end to end, built with Claude Code across **21 spec-first milestones** — every plan reviewed and approved before code.

— React + Capacitor with a **custom Kotlin plugin**: exact alarms that fire with the app closed, a foreground media service, boot receivers.

— **Firestore rooms** — a host imports a published monthly timetable and the whole group syncs live, with no accounts and no ads.

— Directed two structured audit passes and the hardening — security rules, failure guards, **36 unit tests**, verified across a full day on-device. Localised in English, Norwegian and Arabic with right-to-left support.

SKILLS

- FRONTEND
- React, JavaScript, HTML/CSS, responsive UI
- BACKEND & DATA
- Firebase (Firestore, Auth), real-time sync, full CRUD, data modelling
- GAME & AI
- Unreal Engine 5 (Blueprints), reinforcement learning, dynamic difficulty adjustment, telemetry
- LANGUAGES & TOOLS
- Python, JavaScript, C++, C# · Git/GitHub, Perforce, Claude Code, Copilot · spec-first delivery, on-device verification

EDUCATION

- MSc, Computer Science
- USN · 2024 — 2026
- Research-based: software engineering, AI and system architecture for interactive systems. Coursework in data science & data management.
- BSc, Information Technology Engineering
- USN · 2020 — 2024
- Programming, system development and technical communication.
- LANGUAGES
- Norwegian

FLUENT
- English

FLUENT
- Kurdish
